Gitea is an open source Git server which can be used to run your own Git service on Linux, Windows and MacOS. It stores your Git repos online and provides a web interface to manage your code. In addition, users can use services like GitHub, GitLab, Bitbucket and more. Runs on Linux, Windows and MacOS Allows self hosting via Web (HTTPS) interface Code management and issue tracking features like GitHub and GitLab Easy to install and setup MongoDB Upsert & Delete Description MongoDB Upsert & Delete Create great-looking dashboards and reports from your data, even if it's a large volume of unstructured data. With MongoDB Upsert & Delete, you can write documents to a collection and then, if the document already exists in the collection, the document is overwritten. If the document does not exist, it is inserted. Or, if the document is completely new, it can be created and inserted with one call. In addition to writing to and updating existing documents, MongoDB Upsert & Delete is only one of the many features available in the MongoDB Advanced Analytics Pack, a collection of tools for creating dashboards, reports, and visualizations out of your data. To begin, you'll need a MongoDB database instance with at least 16 GB of RAM. You will also need a collection to store your data. Create the collection and prepare it for data by adding a primary key and adding data. Once that's done, begin to create your dashboards. The tools give you immediate access to your data, allowing you to quickly find whatever data is needed. It also makes it easy to create a selection of data that can be quickly updated and used to create reports and charts. Finally, you can use MongoDB Upsert & Delete to convert unstructured data into data that's easily scalable and ready for use. filezilla pro vs ezconnect Description filezilla pro vs ezconnect Begin uploading your first files The best way to explore filezilla pro vs ezconnect is by simply downloading it and trying it out for yourself. filezilla pro vs ezconnect is a free and open source download manager for desktop browsers. Gitea Features By default, the software has a tightly integrated browser-based user interface that automatically adapts to your viewing device. You can log in and browse through the Git instance via the following methods: URL — You can interact with the Git instance via a web browser or mobile application by using the URL of your instance to initiate a connection. For the test instance, you can access it at gitea.io. Serve — Invoke Gitea's client-side browser using the ``serve`` command. Serve on localhost — Activate Gitea's client-side web browser in your local development environment. Access via token — Gitea uses OAuth to authenticate users, so tokens can be revoked at any time. If you're logged in, you'll see a ``Server access token`` field at the bottom of the page. Copy this token to your clipboard, and then paste it into another browser window to access the instance. Webhook — Using the ``webhook`` command, Gitea automatically generates webhook notifications whenever your code changes. Simply hit the ``Reload`` button on your browser, and that button will work like the back button so that you can review changes. Create a repository — The ``New Repository`` button generates a new repository that's based on a given template. Repository basics — Start by creating a new project in a repository, and then explore the options that Gitea provides for user and organizational storage, pre- and post-checkout hooks, file/blob permissions, and other features. Cancel — When you change your mind, hit the ``Cancel`` button in the footer. Search — Launch the ``Search`` button and use the search field for quick access to files and history. Share — Display your account's GitHub profile and access the ``GitHub Pages``
